

Case study: DHFR is the one target where TAMR-DTI's Mamba refinement concentrates on annotated binding residues (fold=2.13, Fisher's-exact $p_{\text{Stouffer}}=1.3\text{e-}09$)

(A) DHFR (P00374) — TP row 5295, pred=0.997, top-1 conformer=0.33

(B) Per-target binding-site enrichment (TP only)

(C) Conformer weights across the 4 DHFR TP rows (same protein, different drugs)
