

Population-level conformer selection across BioSNAP test set (n=5493)

Sorted weights within each sample; solid = mean, dotted = median (gap reveals right-skewed concentration in a minority subset)

TP (n=2341)

TN (n=2404)

FP (n=341)

FN (n=407)

Conformer selection weight

top-1 mean=0.197
top-1 med=0.143
 $P(\text{top-1} > 2/K) = 21\%$

top-1 mean=0.194
top-1 med=0.143
 $P(\text{top-1} > 2/K) = 20\%$

top-1 mean=0.213
top-1 med=0.143
 $P(\text{top-1} > 2/K) = 26\%$

top-1 mean=0.218
top-1 med=0.143
 $P(\text{top-1} > 2/K) = 30\%$

5-95%
IQR (25-75%)
mean
median
